

Abstract of the Disclosure

5 A catamenial absorbent device for insertion into a  
vaginal cavity having two portions: an overwrap  
containing an absorbent structure. The overwrap has two  
portions: a lower, fluid impermeable barrier, an upper,  
fluid-permeable overwrap, and the absorbent structure  
contains absorbent material therein. The two portions  
10 of the overwrap are made from dissimilar materials,  
which are joined at a junction.
